**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-10, drawn to a method for diagnosing a disease state associated with oxidative stress classified in class 436, subclass 811.
  - II. Claims 11-13, drawn to a method for detecting oxidative stress in a subject, classified in class 435, subclass 7.1.
  - III. Claim 14, drawn to an antibody, classified in class 435, subclass 331.
2. Inventions I and II are independent and distinct inventions. Invention I is a method for diagnosing a disease state associated with oxidative stress whereas Invention II is a method for detecting oxidative stress. Invention II requires producing antibodies specific to at least one peptide fragment of non-selenium glutathione peroxidase protein and assaying for the formation of the antibody non-selenium glutathione peroxidase protein and invention I does not require these limitations. Invention I requires determining an increase over time or comparing the measured level of non-selenium glutathione peroxidase protein with a control level and Invention II does not require these limitations.
3. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different

process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as the process of Group II, claims 11-13.

4. Inventions II and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product as claimed can be used in a materially different process such as the process of Group I, claims 1-10.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and the search required for one group is not required for other restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
